Smith Family SMSF

✓ COMPLETE ENTITY REPORT

Snapshot date: 2025-06-30 23:59:00 UTC+10 (+10:00)

Generated: 5 May 2026, 18:44 UTC

HOLDINGS AT SNAPSHOT DATE

0.02442348 BTC

2,442,348 sats

Valuation: 4,051.12 AUD

Rate: 165,870.00 AUD/BTC

Source: CoinGecko 2025-06-30

VERIFICATION SUMMARY

VERIFICATION CHECK	RESULT
Blockchain data verified	Complete - all holdings verified through the snapshot date
Reorg protection	Holdings verified at least 6 blocks deep from chain tip - protected against chain reorganisations
Transaction status	Confirmed transactions only
Holdings scope	All holdings included - this is a complete report
Duplicate check	Each bitcoin output counted exactly once
Independently verifiable	0000000000000000... Full block hash available in the Full Technical Report.
Data source	Blockchain data source is disclosed in the Full Technical Report.
Software version	0.1.0

SOURCE SUMMARY TABLE

SOURCE	TYPE	HOLDINGS	UTXOS	STATUS
Personal Vault	Native SegWit	0.02442348	1	Included

VERIFICATION REFERENCE

Holdings were reconstructed at Bitcoin block 903399, mined approximately 30 June 2025, 13:52 UTC. This block was selected as the last confirmed block on or before the entered snapshot date of 2025-06-30 23:59:00 UTC+10.

A unique cryptographic identifier (block hash) for this block is available in the Full Technical Report and can be independently verified on any public Bitcoin block explorer. This confirms that the holdings figure in this report refers to a specific, immutable point in time on the Bitcoin blockchain.

Block hash (short): 0000000000000000... Full block hash available in the Full Technical Report.

Report generated by BitcoinProof v0.1.0.

DISCLAIMER

What this document is

This report is the output of BitcoinProof, a desktop software application installed and operated on the user's own machine. It is not the output of a regulated financial service, accounting service, audit service, valuation service, or licensed financial intermediary, and it has not been reviewed, certified, or signed by any such party.

What the reconstruction guarantees

The blockchain reconstruction in this report is deterministic and independently verifiable. The wallet descriptor checksums, block height, block hash, confirmation depth, and scan parameters recorded in this report are sufficient for any technically capable party to reproduce this result against the public Bitcoin blockchain using any standard block explorer, without relying on BitcoinProof. No trust in BitcoinProof is required to verify the holdings figures shown.

What the reconstruction depends on

The accuracy of this reconstruction depends on two inputs that BitcoinProof does not control: (i) the correctness and completeness of the wallet descriptors or extended public keys entered by the user, and (ii) the completeness of the blockchain data returned by the queried block explorer at the time of the scan. The block explorer used and the scan timestamp are recorded in this report. Neither the user inputs nor the block explorer data are verified by BitcoinProof.

Valuation

The BTC price, fiat currency, and price source shown in this report were entered manually by the user. BitcoinProof does not retrieve, calculate, or verify any price or fiat valuation. Recipients should obtain or verify market value independently using a source appropriate for their purpose.

Network activity

The reconstruction is performed locally. Wallet descriptors, extended public keys, unspent-output data, identity fields, and report contents are not transmitted to BitcoinProof or stored on any BitcoinProof server. In the course of operation, the application sends Bitcoin script hashes to the queried block explorer in order to retrieve on-chain data, and makes HTTPS requests to bitcoinproof.io for licence validation and version checking, in which the user's IP address is logged. Full detail is in the BitcoinProof privacy policy at bitcoinproof.io/privacy.

Scope

This report reconstructs transaction history and unspent outputs on the Bitcoin blockchain. It does not constitute financial advice, tax advice, accounting advice, legal advice, or a personal recommendation in any jurisdiction. In Australia, this report is not financial product advice within the meaning of section 766B of the Corporations Act 2001 (Cth), and BitcoinProof does not hold an Australian Financial Services Licence. This report is a transaction-history reconstruction, not an independent market-value valuation. Recipients with independent valuation or verification obligations — including SMSF auditors required by ATO guidance to obtain objective, supportable market-value evidence — must obtain such evidence by other means.

Liability

Use of BitcoinProof is governed by the BitcoinProof End User Licence Agreement and Terms of Service available at bitcoinproof.io/terms. Nothing in this disclaimer or those terms excludes or limits any liability that cannot be excluded under applicable law, including consumer guarantees under the Australian Consumer Law, mandatory provisions of the Dutch Civil Code, Article 100(1) of the Swiss Code of Obligations, section 36 of the Norwegian Contracts Act, or equivalent mandatory consumer protections in Spain.
